SUMMARY

- AI engineer with 4 years of experience designing intelligent data pipelines, LLM harness engineering, and scalable backend services for enterprise fintech and banking clients
- Specializes in Azure AI Foundry deployments, fine tuned ML models for high volume transaction filtering, compliance safe LLM integrations, and internal RAG tooling for document intelligence
- Strong foundation in Java/Python, cloud infrastructure (AWS, Azure, GCP), and Azure DevOps-driven CI/CD
- Experienced in translating complex business requirements into cost-efficient, measurable AI solutions

TECHNICAL SKILLS

- **AI / ML & LLMs:** Azure AI Foundry, AWS Bedrock, Azure AI Search (RAG), Semantic Kernel, Claude, Azure Auto ML, Hugging Face, TensorFlow, PyTorch, Scikit-learn, XGBoost, LightGBM, FAISS, MLflow, Feast, MCP
- **Languages & Frameworks:** Python, Java, C++ JavaScript, TypeScript, SQL, Spring, FastAPI, Flask, Node.js, Express.js, React, Redux, Angular, Hibernate
- **Data Engineering & Warehousing:** Snowflake, dbt, Apache Airflow, Apache Spark, Databricks, Apache Kafka
- **Cloud & Infrastructure:** Azure (AKS, Service Bus), AWS (Lambda, Fargate, SQS, SNS, S3, Glue, CloudWatch), GCP, Docker, Kubernetes, Helm, Terraform
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Cassandra, Oracle SQL, GraphQL, Firebase, Pinecone, Elasticsearch
- **CI/CD & Observability:** Azure DevOps, SonarQube, Prometheus, Grafana, OpenTelemetry, Azure Monitor, AWS CloudWatch, GitHub Actions, Jenkins
- **Security & Auth:** OAuth 2.0, JWT, OpenID Connect, SAML, SSL/TLS, CORS/CSRF/XSS Prevention, AWS WAF & Shield, Microsoft Entra ID, keycloak

PROFESSIONAL EXPERIENCE

AI Engineer | BCD iLabs | Chicago, USA

Jan 2026 – Present

- Developed microservice platform Innov8nxt using .NET and Angular, enabling flavor companies to manage R&D, formulations and handle client requests, improving response time by 50%
- Improved LLM workflows including orchestration, context handling, validations and guardrails to generate reliable (formula) experiments recommendations, reducing the data processing time by 90%
- Integrated Azure OpenAI models and Semantic Kernel to power Insight, an enterprise internal Q&A platform enabling analysts to query manufacturing reports and compliance documents in natural language
- Architected agentic workflows within Insight, enabling multi-step autonomous task execution within Azure tenant boundary, satisfying data governance and compliance
- Worked on Foresight platform, a Vision LLM pipeline using Custom Vision/Yolo to inspect manufacturing lines in real time, routing defect-escalated frames to Azure OpenAI for root cause analysis
- Containerized all platform services with Docker and deployed to Azure Kubernetes Service (AKS) via Azure DevOps pipeline maintaining production uptime SLA and supporting multi-tenant enterprise user base

Software Developer | Sports Excitement | New York, USA

Jun 2025 – Dec 2025

- Developed a scalable and robust social media marketplace for sports enthusiasts using Node, Next, and GCP
- Prototyped a personalized recommendation system to suggest relevant posts to users by leveraging collaborative filtering and user-behavior signals, integrating technologies such as Cassandra, TensorFlow (for modeling), and Redis, improving suggestion accuracy by 80%
- Built fuzzy search autocomplete with Elasticsearch and created comprehensive Swagger API documentation, improving search efficiency and accelerating developer onboarding and software releases
- Enhanced CI/CD with Jenkins and automated JUnit testing, reducing faulty deployments by 30%
- Engaged in Agile Scrum practices with cross-functional teams and product owners, contributing to code reviews, backlog refinement, and feature alignment to deliver high-quality, user-focused solutions
- Managed version control using Git, maintaining code integrity and facilitating collaboration with team members to ensure efficient development

Software Engineer | Dataformatics | Mumbai, India

Dec 2022 – Jul 2023

- Delivered end-to-end ML pipeline for financial client data using Python and Scikit-learn for transaction risk scoring and logistic regression for credit behavior prediction, improving automation by 20%
- Built a real-time event streaming layer with Apache Kafka for asynchronous ingestion of transactional data, improving data consistency by 50%; layered Redis caching to cut query latency by 80%
- Served as technical liaison between business stakeholders and engineering team, translating financial compliance requirements into API contracts and delivery milestones, improving cross-team delivery accuracy

Software Engineer | Tata Consultancy Services | Mumbai, India

Nov 2021 – Nov 2022

- Developed reusable React.js functional components (hooks-based) for account statement views in Westpac's digital banking portal, improving UI maintainability and load performance for retail banking users
- Worked on Java reconciliation microservice matching internal ledger transactions against SWIFT MT103 and NPP (New Payments Platform) messages; real-time discrepancy alerting via SQL Server triggers reduced manual exception handling by 80%
- Optimized high-volume SQL Server queries via composite indexing, performance tuning and table partitioning, cutting end-of-day reconciliation batch time by 60%
- Automated customer feedback pipelines using event-driven architecture (AWS SNS + Lambda), reducing feedback processing lag from hours to seconds and enabling faster service iteration
- Managed incident workflows and production deployments using JIRA + ServiceNow; containerized reconciliation services with Docker on AWS EKS, improving scaling efficiency by 25%

Software Engineer | Tekman | Mumbai, India

Jan 2021 – Nov 2021

- Migrated a legacy Java codebase to Node.js, enhancing API response times and scalability.
- Implemented Redux for React state management in factory dashboards, streamlining workflows and improving UI consistency across internal tooling.
- Designed and developed a screen fragmentation feature using React for quick access to critical modules like work order scheduling and production updates, boosting efficiency for plant supervisors and increasing application usage by 20%

Education

Master of Science in Computer Science

University of North Carolina at Charlotte, Charlotte, NC, USA

Aug 2023 – May 2025

Bachelor of Engineering in Computer Science

Mumbai University, Mumbai, India

Jun 2019 – Jul 2021

Projects

Full Stack AI SaaS Platform to Transform Image View Project

- Deployed an AI-powered image processing SaaS platform with features like restoration and generative fill, integrating Clerk for secure auth, Stripe for credit-based payments and Tailwind CSS + Shadcn for responsive UI.

2-D Metaverse View Project

- Developed a scalable Metaverse platform using a mono-repo architecture with WebSockets for real-time communication, Node.js microservices backend, Docker containerization, Kubernetes deployment, and integrating Redis and database clusters to optimize performance.

Wave2Lip: Lip Syncing Real-Time Audio with Image View Project

- Integrated the Wav2Lip project with PyAudio and Flask to enable real-time audio-to-lip movement conversion, using a CNN-based model for accurate synchronization by processing audio and image frames simultaneously.
